

# EXPERIENCE THE VERSATILITY OF AN AGTRON LEGEND SYSTEM

THE LEGEND  
SYSTEM

- ✓ The sensor loop connects to a single module which sends the seed count information gathered by each sensor via WI-FI to an Android tablet

---

- ✓ The LEGEND BASIC is the simple way to bring Rate and Blockage monitoring to your drill. Only one tiny module is required. You can have one sensor per tower, or monitor all runs. Adding sensors does not require more boxes, cables or programming.

---

- ✓ The LEGEND BASIC can be used with drills having up to 120 seed runs and 120 fertilizer runs. Options are available for a work switch to prevent alarms when the toolbar is lifted. Android tablets provide a GPS speed signal;

---

- ✓ Because of the small size of the module, it can be installed anywhere on your toolbar, or hitch, as long as there is a clear line of sight from the cab.

---

- ✓ The module itself can easily be ziptied, or bolted into place, thanks to its unique design.
